

This module comes with 2 reversible panels. The function is selected with a DIP switch on the back, and can be set to (dual) NOT, AND, OR, XOR.

The AND, OR, XOR modes also give access to their complementary signals referred as NAND, NOR, XNOR.

Even though nothing bad will happen if the setting of the DIP switch doesn't match the panel, it may be confusing, so just pay extra attention to it.

Also make sure the orientation of the markings matches both on the front panel and on the back of the unit.

Modules come pre-configured and can be set as follows :

1	2	MODE
ON	ON	NOT
ON	OFF	AND
OFF	ON	OR
OFF	OFF	XOR

Truth tables :

A/B	NOT
0	1
1	0

A	B	AND
0	0	0
0	1	0
1	0	0
1	1	1

A	B	OR
0	0	0
0	1	1
1	0	1
1	1	1

A	B	XOR
0	0	0
0	1	1
1	0	1
1	1	0
